

Table of Contents

1	Overview and recommendations	1
1.1	Introduction	1
1.2	Objectives	1
1.3	Approach	2
1.4	Outputs	2
1.5	Outcomes	3
1.5.1	Dead-wood scenario	3
1.5.2	Green-wood Scenario	5
1.5.3	The plantation scenario	6
1.5.4	Ecological impacts	6
1.6	Implications for Management and Policy	7
1.6.1	Dead-wood scenario	7
1.6.2	Green-wood scenario	8
1.6.3	Plantation scenario	8
1.7	Recommendations	9
1.8	Conclusions	9
2	Firewood from the Murray-Darling Basin; context and issues	11
2.1	Context	11
2.2	Objectives	12
2.3	Primary outcomes	12
2.4	Project Approach	13
2.5	Background	13
2.5.1	Key Findings from Driscoll et al.(2000)	13
2.5.2	Comparisons of key findings to other firewood estimates	14
2.5.3	Relevance to the current project	16
2.6	Workshop	16
2.7	Definition of sustainable harvesting	17
2.7.1	A scenario approach to sustainability	18
2.8	Report Structure	18
3	The Exploitation Criteria	19
3.1	Overall exploitation criteria	19
3.2	The dead-wood scenario	20
3.3	The green-wood scenario	21
3.4	The plantation scenario	23
3.5	Application of the exploitation criteria	24

4	The Geographic Information System.....	25
4.1	Coordinate system	25
4.2	Data	26
4.2.1	Data sources	26
4.2.2	Data limitations	27
4.3	The application of the exploitation criteria in the GIS	32
4.3.1	The overall exploitation criteria; methods.....	33
4.3.2	The overall exploitation criteria; results	33
4.3.3	The dead-wood scenario; methods	33
4.3.4	The dead-wood scenario; results.....	34
4.3.5	The green-wood scenario; methods.....	35
4.3.6	The green-wood scenario; results	42
4.3.7	The plantation scenario; methods	46
4.3.8	The plantation scenario; results	48
5	Model review and forest mensuration data for model development and validation	54
5.1	Introduction.....	54
5.2	Review of existing models and forest data	54
5.3	White Cypress Pine Model	55
5.4	Data from known age forests	57
5.5	Forest and woodland types.....	58
5.5.1	Defining the forests of the MDB	58
5.5.2	Descriptions of the forests and woodlands in the MDB	59
5.6	Field sampling design.....	61
5.6.1	Net primary productivity.....	61
5.6.2	Stand age	61
5.6.3	Position on slope	62
5.7	Field sampling methods	62
5.7.1	Live tree measurements.....	63
5.7.2	Coarse woody debris	64
5.7.3	Ecological data	64
5.8	Summary Data	64
6	Growth and yield models	66
6.1	Summary.....	66
6.2	Introduction.....	66
6.3	Data	67

6.3.1	Stand measurements.....	67
6.3.2	Stand stem wood biomass.....	67
6.3.3	Coarse woody debris stand biomass	67
6.4	Model for stand stem wood biomass growth	68
6.4.1	Approach	68
6.4.2	Site productive capacity	68
6.4.3	Stand density	69
6.4.4	Fitted model.....	71
6.4.5	Predicting growth at young ages	72
6.5	Model to predict coarse woody debris biomass	73
6.6	Growth and yield model.....	74
6.6.1	Undisturbed stands	74
6.6.2	Thinned stands	76
6.6.3	Firewood harvests	78
6.7	Testing and applying the model	78
6.8	Growth and firewood yield of mallee forests	81
6.9	Model Applications	82
7	The dead-wood scenario.....	83
7.1	Summary.....	83
7.2	Introduction.....	83
7.3	Sustainable yield prediction.....	84
7.4	Forest area and stratification.....	84
7.5	Firewood harvest management regimes	86
7.6	Long-term firewood yields	87
7.6.1	Method of determining yields	87
7.6.2	Woody debris remaining after firewood harvest	88
7.6.3	Firewood harvest yields.....	89
7.7	Sustainable firewood supply over the next 100 years	90
7.7.1	Mathematical programming system	92
7.7.2	Sustainable firewood supply	94
7.7.3	Residual woody debris	95
7.8	Discussion and conclusions	96
8	The green-wood scenario	98
8.1	Summary.....	98
8.2	Introduction.....	98
8.3	Forest area and stratification.....	98

8.4	Management regimes	100
8.4.1	Mallee forest.....	100
8.4.2	Non-mallee forests	101
8.5	Sustainable firewood supply over the next 100 years	105
8.5.1	Firewood supply with standard management regimes.....	105
8.5.2	Sustainable firewood supply	106
8.5.3	Residual woody debris	107
8.6	Discussion	108
9	Case studies on the potential ecological impacts of firewood harvesting	110
9.1	Introduction.....	110
9.2	Australian research into ecological impacts	111
9.2.1	Estimation of amounts of coarse woody debris.....	111
9.2.2	Terrestrial vertebrate and invertebrate diversity and coarse woody debris	112
9.2.3	Ecosystem function and coarse woody debris	113
9.3	Case studies for ecological impacts	113
9.3.1	Measurements of sustainability.....	114
9.3.2	Data management.....	115
9.4	Description of study area	115
9.5	Description of case study sites.....	118
9.5.1	Murrumbateman	118
9.5.2	Frogmore	122
9.5.3	Bungendore	124
9.5.4	Bredbo.....	127
9.6	Sampling Methodology.....	132
9.6.1	Birds.....	133
9.6.2	Small ground-dwelling mammals	133
9.6.3	Plants.....	133
9.6.4	Coarse woody debris	133
9.6.5	Regeneration.....	134
9.6.6	Landscape Function Analysis.....	134
9.7	Analysis methods	135
9.7.2	Birds.....	137
9.7.3	Small ground-dwelling mammals	139
9.7.4	Plants.....	139
9.7.5	Coarse woody debris	139
9.7.6	Regeneration.....	140

9.7.7	Landscape function analysis	140
9.7.8	Forest/habitat variables	140
9.8	Analysis results	141
9.8.1	Birds.....	141
9.8.2	Small ground-dwelling mammals	144
9.8.3	Plants.....	144
9.8.4	Coarse woody debris	146
9.8.5	Regeneration.....	147
9.8.6	Landscape Function Analysis.....	148
9.8.7	Forestry/habitat variables.....	149
9.9	Discussion	150
9.9.1	Birds.....	151
9.9.2	Small ground-dwelling mammals	154
9.9.3	Plants.....	156
9.9.4	Coarse Woody Debris	157
9.9.5	Regeneration.....	159
9.9.6	Landscape Function Analysis.....	160
9.10	Further silvicultural management considerations for biodiversity.....	161
9.10.1	Variability of forestry attributes within dry sclerophyll forest.....	161
9.10.2	Forest stands and the self-thinning rule	161
9.11	Conclusions	162
10	Native hardwood plantation scenario.....	165
10.1	Summary.....	165
10.2	Introduction.....	165
10.3	Growth and yield model.....	167
10.4	Estimating plantation firewood yields in the Murray-Darling Basin	169
10.4.1	Site productive capacity	169
10.4.2	Relating site index to net primary productivity index	169
10.4.3	Predicting firewood yields from <i>Eucalyptus globulus</i> plantations	172
10.5	Plantation areas required to supply firewood from the Murray-Darling Basin	174
10.6	Discussion and conclusions	176
11	Management and Policy Implications.....	178
11.1	Objectives revisited	178
11.2	Outcomes of scenario analysis	179
11.2.1	The dead-wood scenario.....	179
11.2.2	The green-wood scenario	180

11.2.3	The plantation scenario	182
11.3	Environmental impacts	184
11.3.1	The dead-wood scenario.....	184
11.3.2	The green-wood scenario	185
11.3.3	The plantation scenario	187
11.4	Combination of strategies	188
11.5	Achievements against objectives.....	188
12	Acknowledgements.....	189
13	References.....	191
14	Appendices.....	203
